Professional Summary

Backend-focused Full Stack .NET Engineer with 3+ years of experience building secure, data-intensive applications with C#, ASP.NET Core (.NET 8 / .NET 10), PostgreSQL and SQL Server, plus React and Angular front ends. Currently contributing to ABIS, a **government biometric identification system with 40+ million records**, across legacy-data migration, bulk-ingestion APIs and security. Independently designed, built and launched **SachAI (sachaitech.com)**, an AI video authenticity platform with a .NET 10 API, background processing, a React 19 client and a Python AI inference service. Strong in API design, database design, query optimization, authentication/authorization and reliable delivery in Agile teams.

Technical Skills

Languages: C#, TypeScript, JavaScript, SQL, Python

Backend: ASP.NET Core (.NET 8 / .NET 10), ASP.NET MVC, REST APIs, Microservices, Clean Architecture, Entity Framework Core, FluentValidation, Hangfire, SignalR

Databases: PostgreSQL, SQL Server, MySQL, Database Design, SQL Query Optimization, Indexing, Data Modeling, EF Core Migrations

Frontend & Desktop: React 19, Angular, Vite, Ant Design, TanStack Query, WPF, MVVM

Security: JWT & Refresh Tokens, ASP.NET Core Identity, OAuth (Google/Facebook), RBAC, PKI, Keycloak, Rate Limiting, Data Encryption

AI & Media: Python FastAPI, PyTorch, Hugging Face Transformers, FFmpeg

Testing & DevOps: xUnit, pytest, Vitest, Playwright, Docker, Git, Serilog, Health Checks, S3-Compatible Storage (Cloudflare R2)

Practices: Agile/Scrum, Code Quality, Production Debugging, Performance Optimization, AI-Assisted Development

Work Experience

C# .NET & WPF Developer

Apr 2025 – Present

TechoStudios Pvt Ltd | Islamabad, Pakistan

Project: ABIS – Automated Biometric Identification System (Government, 40+ million fingerprint, face, iris and palm records)

- Develop and maintain ASP.NET Core (.NET 8) backend services and high-performance REST APIs for bulk ingestion and search workflows.
- Build legacy-data migration pipelines: EFT extraction, transformation, validation and integration into the new platform.
- Design and evolve PostgreSQL schemas and optimize SQL queries for data integrity and performance on large datasets.
- Implement JWT, role-based access control (RBAC) and PKI security workflows; contribute to performance, reliability and production readiness.
- Integrate backend services with WPF desktop and web clients; contribute to implementation planning, debugging, code quality and Agile delivery.

C# .NET & React Developer

Jan 2024 – Apr 2025

Datagonomix / 1Journey.ai Pvt Ltd | Pakistan

- Delivered full-stack production features with ASP.NET Core and React, from REST API implementation through frontend integration.
- Worked on 1Journey.ai (1journey.ai), a public AI-driven education platform for learning roadmaps and student workflows, and on production web work in the Datagonomix ecosystem.
- Implemented reliable data flows with relational databases; optimized SQL queries and backend logic for performance and maintainability.
- Resolved production bugs and delivered frontend and backend functionality in iterative releases.

Arhpez Technologies Pvt Ltd | Islamabad, Pakistan

- Worked on ASP.NET Core applications and Angular frontend features, implementing backend logic, APIs and database design tasks.
- Supported feature implementation, debugging and team-based delivery in a structured development environment.

Projects

SachAI – AI Video Authenticity Platform

Personal Product · Live · 2026

sachaitech.com | ASP.NET Core (.NET 10), EF Core, PostgreSQL, Hangfire, FFmpeg, React 19, TypeScript, Python FastAPI, PyTorch, Docker

- Designed and built the complete product as three services: a .NET 10 Web API in Clean Architecture layers (Domain, Application, Infrastructure, API), a React 19/TypeScript client and a FastAPI AI inference service.
- Built an asynchronous analysis pipeline on Hangfire: FFmpeg frame and metadata extraction, AI scoring, evidence generation and downloadable PDF reports, with pause/resume, retries, timeouts, a provider circuit breaker and recovery of stuck or duplicate jobs.
- Implemented security with ASP.NET Core Identity, JWT and refresh tokens, Google/Facebook sign-in, email confirmation, password reset, account lockout, owner-based authorization, rate limiting, security headers, application-level encryption and audit logs.
- Modeled the PostgreSQL schema through versioned EF Core migrations with performance and hash-lookup indexes; added perceptual frame hashing to match re-uploaded videos, S3-compatible storage (Cloudflare R2) and automatic 3-day data retention cleanup.
- Added subscription plans, free-trial limits, scan reservations with reconciliation and Easypaisa payment integration, plus an admin dashboard for users, videos, jobs and logs.
- Ensured production readiness with health checks (database, storage, Hangfire, AI service), Serilog structured logging with correlation IDs, Docker, deployment and smoke-test scripts, and automated tests (xUnit, pytest, Vitest, Playwright).
- Built the AI service with mock and real modes, Hugging Face/PyTorch models and a weighted, calibrated ensemble of video- and frame-level detectors.

Interior Hospital Management System (IHMS)

Academic Project · 2023

ASP.NET MVC 5 (.NET Framework 4.7.2), Entity Framework, jQuery, Bootstrap

- Built a role-based system with separate Admin, Doctor, Patient and Pharmacy areas: departments, doctor schedules, rooms, appointments, inpatients and outpatients.
- Developed the pharmacy module covering medicines, categories, distributors, manufacturers, purchases, sales invoices, purchase returns and stock.

Airline Management System

Personal Project · 2024

ASP.NET MVC 5 (.NET Framework 4.7.2), Entity Framework, jQuery

- Built an admin application to manage airlines, airports, routes, schedules, cabins, fares, customers and reservations, with a country, province and city hierarchy.

Education

Bachelor of Science in Computer Science (BSCS)

2019 – 2023

Gomal University, Pakistan | CGPA: 3.61 / 4.00

Languages: English (Fluent), Urdu (Native)
